

Forest plot showing the association between various factors and the risk of COVID-19. The x-axis represents the risk ratio on a log scale, ranging from -0.2 to 0.6. A vertical dashed line at 0.0 indicates no association. Factors are grouped by color: blue (top), orange, green, red, purple, and brown (bottom). Each factor is represented by a point estimate (circle) and a horizontal line indicating the confidence interval.
